

## Universal Control Panel

The Universal Control Panel is ideal for all GigaTec Technology's routing switchers. The scale ranges up to 1024×1024. With flexible configuration, it controls the routing switcher via CAN (RJ-45 interface) and C-BUS (BNC interface) cable and supports up to 32 cascading control panels. The function controls on the front panel includes Source, Destination, Level, Lock/Unlock, Switch and Save. The display area shows the control panel information or the matching relationship of crosspoint. In addition, some controls can be user-defined as needed.

The control panel is multi-functional, highly-compatible, and easy to operate.
