

The DVF-2102 is a SDI frame synchronizer. It is used in i-MOD platform. The module accepts 1 SDI input and provides 4 SDI outputs genlocked to external reference input signals. 2 CVBS outputs are provided for monitoring. Continuous H/V phase adjustment is available. Equalizing is up to 656 ft (200 m).

The DVF-2102 can be controlled locally by means of an intuitive card-edge interface or remotely using i-MOD platform control software IM-MASTER.
