

### MVR Routing Switcher

MVR routing switchers feature compact structure and provide high-performance in routing of VGA signals. R, G, B, H and V components of VGA signals can be transmitted independently for clear image. Switching sizes are available from 2x2 to 16x16.

### Various Control

MVR is equipped with LCD display and buttons on front panel for easy control. Both manual switching and auto switching are supported to satisfy a variety of routing control demands.

### High Compatibility

MVR supports RS-232/422 control protocol. A RS-485 interface is provided for cascading control. Up to 8 FLEX series routing switchers can be connected. The routing switcher features powerful expansion and compatibility.

MVR series routing switcher is widely used in large screen display projectors, distance learning, command control centers and multimedia conference system applications.
